

Johan Janérs

Fullstack Developer | Backend (.NET/C#) | Applied AI
Stockholm, Sweden

johanjaners@gmail.com | +46 761 089 671 | [LinkedIn](#)

Fullstack Developer with 6+ years of engineering experience in cross-functional technical environments, combined with intensive fullstack .NET training through School of Applied Technology (SALT). Experienced in building and deploying web applications to Azure using C#, ASP.NET Core, React, and TypeScript, with additional Python experience for scripting and data processing. Focused on reliable backend systems, APIs, and modern web applications, with growing experience in applied AI solutions.

Technical skills

General

.NET / C#
Python
JavaScript
TypeScript

Backend

.ASP.NET Core
REST APIs
Entity Framework
SQL server, PostgreSQL
Kafka (producers, consumers)
Clean Architecture
Microservices (event-driven)
JWT Authentication
In-memory search

Frontend

React
TanStack Query
HTML, CSS, Tailwind

Cloud & DevOps

Azure (App Service, Blob Storage, Static Web App, OpenAI, Vision)
AWS (Amplify, Elastic Beanstalk, CloudFront)
CI / CD (GitHub Actions)
Docker
Clerk Auth

Tools

Git + GitHub
VS Code
xUnit
TDD
Agile

AI

Azure OpenAI
Azure AI Vision
Github Copilot

Social

Languages

Swedish - Native
English - Fluent

EDUCATION & TRAINING

Full-Stack .NET / C#

Oct 2025 - Jan 2026

School of Applied Technology (SALT)

Intensive program in full-stack development with C#, .NET, React, TypeScript, TDD, and mob programming.

M.Sc. Mechanical Engineering

2014 - 2019

Luleå University of Technology

Master's degree focused on technical problem-solving, simulation, and systems development.

WORK EXPERIENCE

Consultant .NET Developer

Feb 2026 - Apr 2026

School of Applied Technology (SALT)

Delivered backend and AI focused development sprints through SALT's Graduate Program, including microservices architecture, event driven services with Kafka, and AI integrated web applications.

Event Driven Payment Service — Backend (.NET, Kafka, PostgreSQL)

Designed and implemented an event driven payment and invoice processing service using .NET, Kafka, EF Core, and PostgreSQL. Owned core payment service logic and invoice flow, including event handling, persistence layer implementation, cross team event contract alignment, and integration testing. **Tech:** .NET, Kafka, EF Core, PostgreSQL, Microservices

Repo: [event-driven-payment-service](#)

Note2QuizAI — Full-Stack (.NET + React, Azure AI, AWS)

AI-powered quiz generator built with ASP.NET Core and React using Azure AI Vision and Azure OpenAI. Implemented quiz generation, submission, and scoring logic. Deployed to AWS including HTTPS and CORS configuration.

Tech: ASP.NET Core, React, Azure (Vision OCR, OpenAI), AWS (Amplify, Elastic Beanstalk, CloudFront)

Live: [Note2QuizAI](#)

Performance Data Engineer

2025

Polestar

- Developed Python tools for log-data processing and automated KPI reporting (PDF, CSV)
- Built data-processing pipeline for extracting signals and computing metrics
- Implemented modular architecture with loaders, extractors, and exporters

Test Engineer

2022 - 2025

Polestar

- Collaborated with international engineering teams in software, hardware and data analysis environments
- Performed system validation, test analysis in cross-functional environments
- Planned and executed test activities and documented results

Design Engineer

2019 - 2022

Polestar

- Developed battery system components from early studies to prototype development
- Contributed to requirement definitions and system integration

Research Engineer

2019

GKN Aerospace

- Conducted simulation and analysis for early-stage concept development

PROJECTS

Recipe Search API — Backend (.NET, Azure)

AI-powered recipe search API with multilingual query understanding and deterministic ranking. Implemented in ASP.NET Core Web API using Azure OpenAI and a custom in-memory search engine. Deployed on Azure App Service with Blob Storage.

Tech: ASP.NET Core, C#, Azure (App Service, Blob Storage, OpenAI), Clean Architecture

Live: [recipe-search-api](#)

PulseCare — Full-Stack (.NET + React, Azure)

Healthcare platform built in a team of 11 developers.

Owned appointments domain with full CRUD APIs and frontend integration.

Tech: ASP.NET Core, Entity Framework, React, TypeScript, SQL Server, Clerk, Docker, Azure

Live: [PulseCare](#)
